

Multisectoral Urban Systems for Health and Equity in Canadian Cities (MUSE)

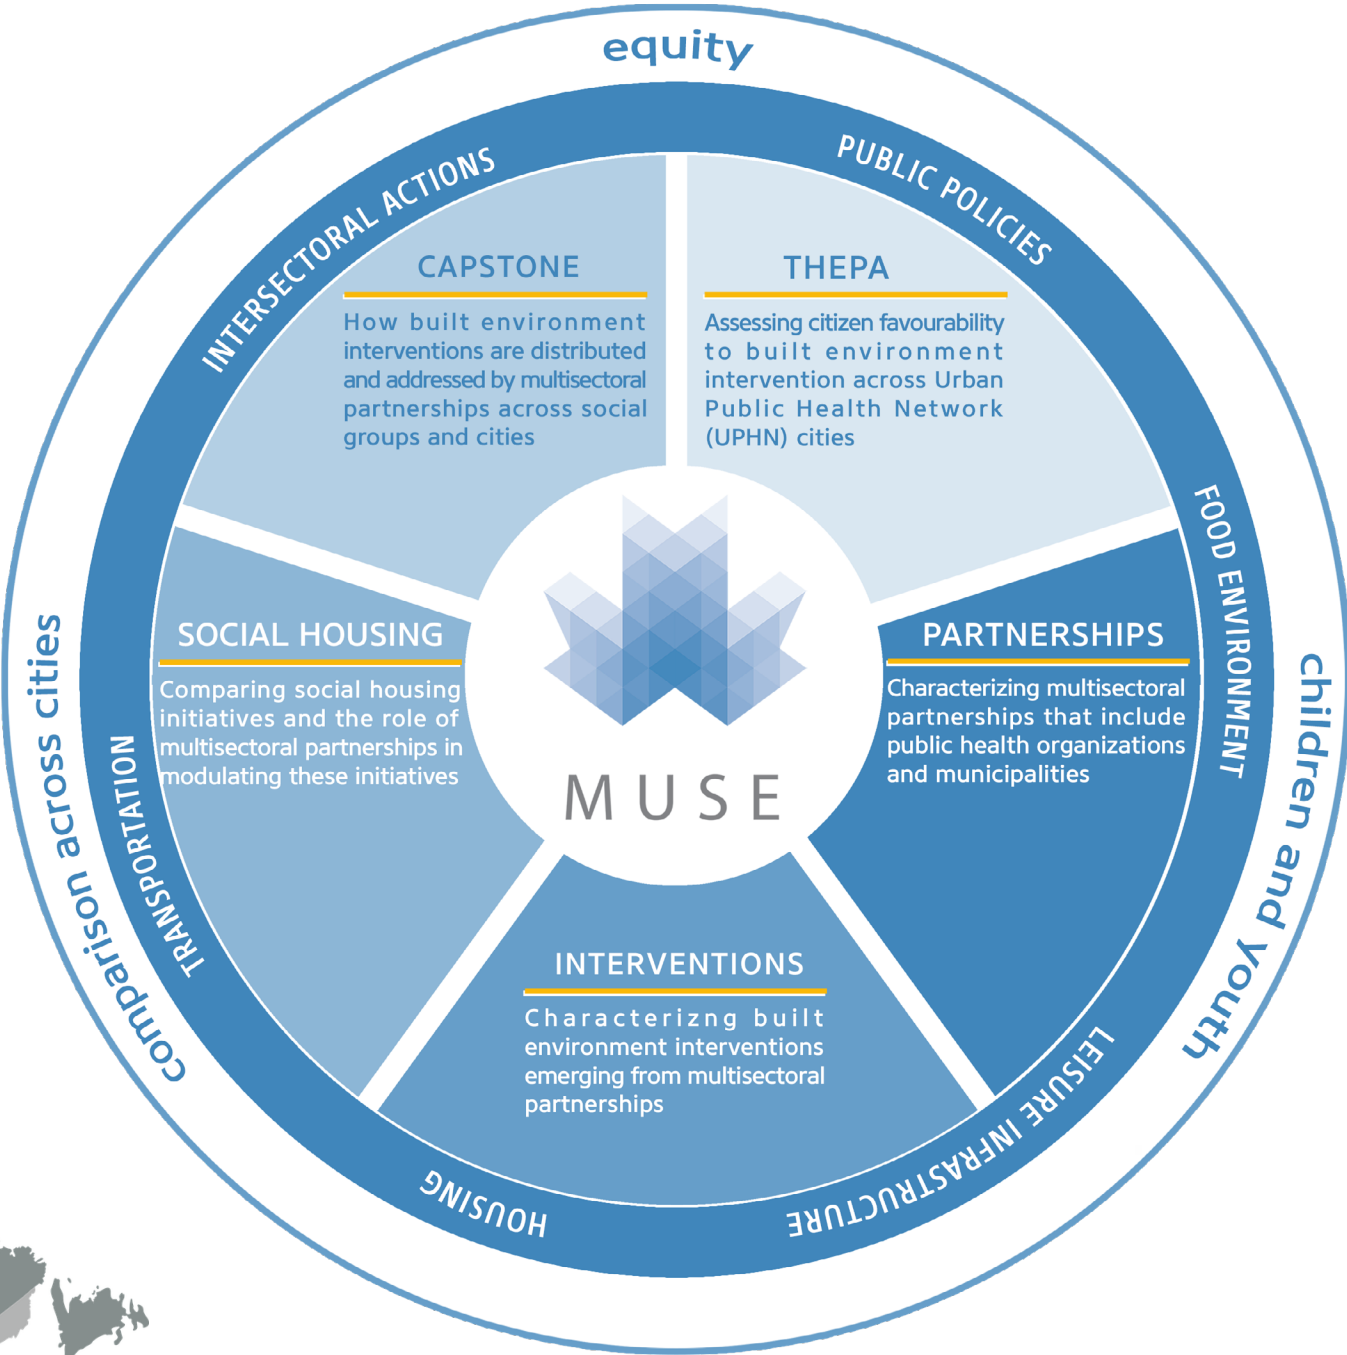

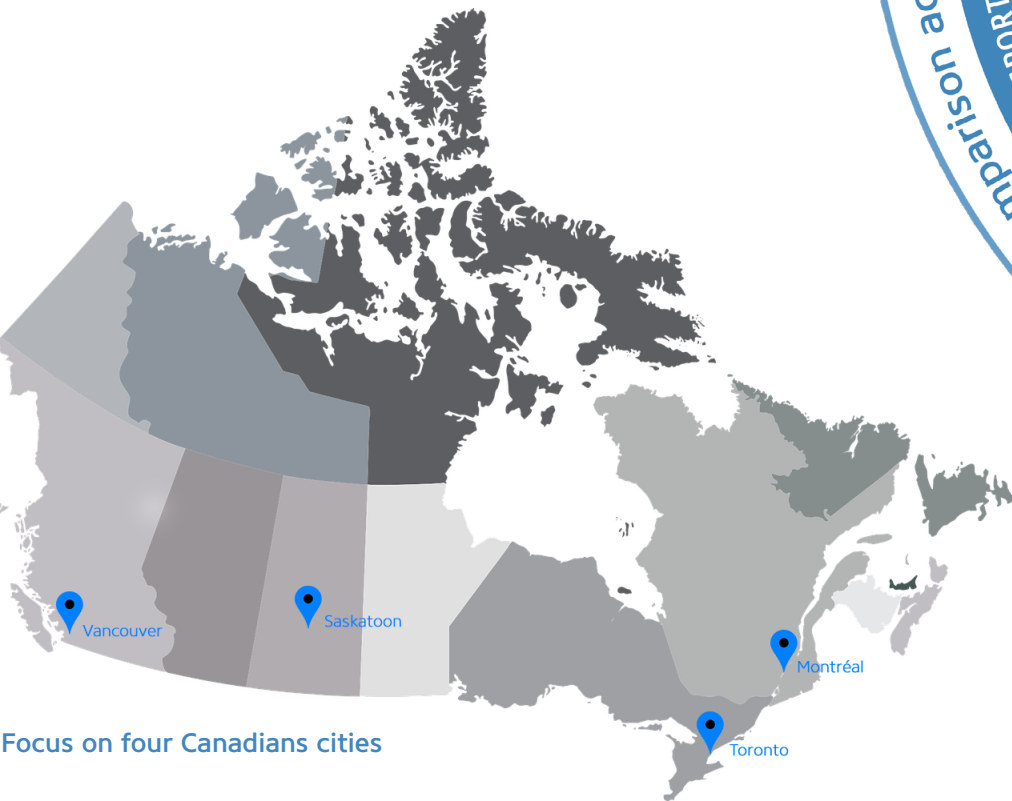

Research Program at a Glance

Objective

To gather and share scientific evidence about the structure, composition, functioning, and outcomes of Multisectoral Partnerships to help cities make informed decisions about investments in partnerships and built environment interventions

Considerations

- ▶ Equitable distribution of opportunities
- ▶ Accessibility of interventions for youth

musecollaboratory.ca

Outcomes

Better understanding of how multisectoral partnerships yield changes to the built environment

Support for stronger partnerships between public health and municipal partners focused on health promoting built environment

More opportunities for healthy behaviour through interacting with built environment

Healthier cities
